

Council Grove High School

Mathematics Program

Calculator CONTRACT

In order for students to be successful in Mathematics courses, it is at times necessary for all students to have access to a graphing calculator. Council Grove High School and the school district understands that graphing calculators are expensive and would like to ease the burden of additional expense to families by providing a "Calculator Check-Out System." *We still encourage students who are college bound to purchase their own if possible.*

USD #417 will check out or loan one (1) TI Graphing Calculator to any student enrolled in a math class who does not wish to purchase his/her own graphing calculator.

The "loaned" calculator will be issued upon receipt of this contract signed by both the parent and student. Before signing, please be aware of the following...

1. The care and maintenance of the calculator is the responsibility of the student which includes the purchase of batteries should the batteries become low and need changing.
2. The student will bring the calculator to class each day. One (1) calculator is "loaned" for both classroom and homework use. Additional classroom sets are not available.
3. Should the graphing calculator "checked out" to the student become lost, stolen, broken, or damaged, the student will pay a \$100 replacement fee or buy a replacement calculator. **Work option:** The student may work for the replacement fee (minimum wage). Work will be assigned by the building administration, and the work will be performed before or after school.
4. Teachers may ask for calculators to be checked-in, inspected, and then reissued at different times throughout the semester or school year.
